SUMMARY

- Resolved **40+ client-reported issues** as a full-stack developer with 4 years of production support — via **Splunk-based root-cause investigation** during on-call rotations.
- Collaborated across **20+ engineering teams**, authoring the specs and acceptance criteria that bridge Product, QA, and Engineering.
- Top 30 of 1,500+ engineers** for 10 consecutive months — building and testing **REST API integrations** and owning release/QA testing (functional, regression, end-to-end) before every production rollout.

WORK EXPERIENCE

Software Engineer | Paycom, Grapevine, TX

Dec 2022 – May 2026

- Shipped **2 major features** end-to-end in 4 and 6 weeks — authoring both specs solo (edge cases, acceptance criteria) with zero client-reported defects.
- Caught 10 pre-launch defects as **QA Engineer of record** before any could reach a client.
- Resolved 15 **after-hours incidents** via on-call rotation — restoring delivery SLAs by the next day through Splunk log analysis.
- Inherited an abandoned Selenium test suite (~100 tests) from a departing teammate — fixing broken scripts to keep coverage running while shipping own features in parallel.
- Owned 400+ automated tests across 10 major feature releases in one year — with 100% production success.

Software Engineer Intern | Paycom, Grapevine, TX

May 2022 – Sep 2022

- Cut page load time by 71% — from about 7 seconds to about 2 seconds — by rebuilding a legacy single-page UI into React and eliminating per-field save requests; **3 of 3 team interns**, including myself, converted to full-time — while collaborating on specs cross-functionally.

Medical Laboratory Technologist | Memorial Hermann Health System, Houston, TX

Sep 2016 – Dec 2021

- Processed 100+ samples per shift** across chemistry, hematology, and blood bank — verifying **diagnostic data accuracy (Cerner, Meditech)** with zero critical errors — so physicians and PAs could deliver correct patient treatment.

FEATURED PROJECTS — SOLO END-TO-END OWNERSHIP

Suppressed Fields Usability Items

- Cut field-change investigation time by 99%** — from over an hour of cross-team back-and-forth to about 5 seconds — via audit/trigger tables with full change history, search, sort, pagination, and export (.csv, .xlsx, PDF).
- Closed a silent data-loss risk with unsaved-changes validation, fixed misordered fields into alphabetical order, and applied **internationalization for non-English-speaking clients** — testing across 15 related modules.

Copy and Search in Suppressed Fields

- Cut permission-profile setup by 98%** — from **30 minutes of manual field-by-field selection (up to 1,000+ fields per profile) to about 30 seconds**, building a copy feature spanning the User and Permission Profile screens.
- Built **real-time per-bucket search bars**, live field count indicators and resolved a legacy query bug returning incorrect results.

ADDITIONAL PROJECTS

ARW Field Limit Warning System

- Built a live field count tracker — **warning near 500 fields and red alert when exceeded**, both carrying through to report generation.

Name Casing Options in Advanced Report Writer

- Enforced **'Upper Case' as default across 13 name fields** and added 'User Entry' option — protecting existing client automation on flag enablement.

Reports Casing — EE Names (Legacy & Monte Carlo)

- Saved 20+ module teams an estimated week each by building a reusable **ReportsCasingService** for Legacy and MVC frameworks using regex.

New ARW Fields — Reporting Module Enhancements

- Unlocked 30+ new revenue-generating report fields for clients by expanding ARW and reporting module capabilities.

International Currency Display in Reports

- Delivered **local-currency payroll reporting across 190+ countries** for international clients.

ARW Filter Display Enhancement

- Implemented dynamic filter display logic ensuring selected filters render with **accurate descriptions on the correct module tabs**.

AppSec & Security Hardening

- Resolved 300+ AppSec tickets — implementing **XSS prevention, injection protection, and output encoding**.

Legacy Architecture Modernization & Performance Improvements

- Cut a reporting query from 5 minutes to 30 seconds (90% faster) via indexing, and a redundant module-call chain from 30 to 5 minutes (83% faster).

Reporting Module Maintenance & Bug Resolution

- Resolved **150+ maintenance tickets** — **fix and improvement requests from Product, QA, and clients** via Splunk log analysis and internal documentation.

EDUCATION

B.S. Computer Science — University of Houston – Downtown | GPA: **4.0** | Dec 2022

A.S. Clinical Laboratory Science — Coleman College | GPA: **4.0**

TECHNICAL SKILLS

Languages: PHP, C++, Python, Java, JavaScript (ES6+), HTML/CSS, jQuery, React

Databases: MySQL — query optimization, audit/trigger tables, high-volume performance

Tools & Platforms: PHPStorm, GitLab, Jira, Splunk (log analysis), Selenium (inherited suite maintenance)

Engineering: Agile/Scrum, REST APIs, MVC, regex, legacy modernization, i18n, feature flags, root cause analysis

QA & Testing: Functional, regression & end-to-end testing, test automation, defect triage, acceptance criteria authoring

Security: XSS prevention, injection attack protection, output encoding, AppSec remediation

CERTIFICATIONS & AWARDS

3rd Place — Paycom Codeathon 2025 — Company-wide competitive hackathon

Employee of the Quarter & Employee of the Month — Memorial Hermann Hospital | Q3 2019 & June 2020

Board-Certified Medical Laboratory (MLT) — ASCP
