PROFESSIONAL SUMMARY

Software Engineer with 3.5 years of full-stack development experience building scalable HR and reporting platforms at Paycom. Recognized as a Top 30 Developer and known for delivering high-quality features end-to-end — from technical design and development to QA and production support. Proven expertise in PHP, JavaScript, MySQL, and Agile/Scrum environments. Open to software engineering, QA engineering, data analytics, business analysis, and technical roles across the technology industry.

TECHNICAL SKILLS

Languages: PHP, JavaScript (ES6+), HTML/CSS

Databases: MySQL

Tools & Platforms: PHPStorm, GitLab, Jira

Engineering Practices: Agile/Scrum, REST APIs, code reusability patterns, framework injection, legacy modernization

QA & Testing: Functional testing, regression testing, defect triage, acceptance criteria authoring

PROFESSIONAL EXPERIENCE

Software Developer IV — Paycom — Grapevine, TX

Dec 2022 – May 2026

- Designed, enhanced, and internationalized global HR reporting modules — implementing a translation layer that unblocked language support for clients across 180+ countries, focusing on scalable and secure architecture.
- Implemented a reusable framework injection service across multiple modules, increasing code reusability and meaningfully reducing development time.
- Optimized MySQL queries on high-volume client databases, improving report generation performance for big data workloads.
- Analyzed and refactored codebase for jQuery version compatibility, resolving deprecated functions and preventing production conflicts.
- Authored technical specifications including requirements, edge cases, and acceptance criteria in collaboration with Product and QA teams.
- Assumed QA ownership when coverage was unavailable — independently tested features, reproduced defects, validated fixes, and ensured release readiness.
- Served in on-call rotation; diagnosed and resolved after-hours push-reporting failures, restoring delivery SLAs.

Software Developer Intern — Paycom — Grapevine, TX

May 2022 – Sep 2022

- Collaborated with cross-functional teams to define specifications and develop internal interfaces and services.
- Delivered UI improvements to the production codebase, enhancing functionality of internal tools used across the organization.

Medical Laboratory Technologist — Memorial Hermann — Houston, TX

2016 – 2021

- Performed and interpreted diagnostic laboratory tests for patient care, communicating critical results to physicians and nursing staff in a fast-paced clinical environment.
- Maintained and troubleshooted automated analyzers, minimizing downtime and ensuring accuracy in high-stakes operations.

PROJECTS

- Suppressed Fields & Copy Feature:** Engineered audit and trigger tables for suppressed fields functionality; built a copy user/permission profile feature to bulk-suppress across 12+ buckets and 1,000+ fields — eliminating manual field-by-field selection and significantly reducing configuration time for users.
- Allspark — Front-End Migration:** Contributed to the modernization of legacy front-end pages, building filters, landing pages, and edit pages while expanding front-end capabilities across the team.
- Global HCM & International Architecture:** Designed and enhanced HR reporting modules for international clients, focusing on scalable and secure architecture accessible across 180+ countries.
- Translation & Internationalization Initiative:** Implemented translation support across multiple modules — including the Push Reporting module and Suppressed Fields (Profile & User) — enabling international clients to toggle language settings so that all front-end UI text and prompts dynamically display in their native language, significantly improving accessibility and usability for clients across 180+ countries.
- Legacy Advanced Filter Modernization:** Migrated legacy advanced filters to modernized versions, significantly improving responsiveness and user experience.

- **jQuery Version Upgrade:** Analyzed and refactored codebase for jQuery version compatibility, resolving deprecated functions and preventing production conflicts.
- **Framework Injection Service:** Implemented a reusable framework injection service across multiple modules, increasing code reusability and reducing development time.
- **MySQL Query Optimization:** Optimized queries on high-volume client databases, improving report generation performance for big data workloads.
- **AppSec & Security Hardening:** Resolved AppSec tickets across multiple modules to strengthen application security — implementing cross-site scripting (XSS) prevention, injection attack protection, and output encoding to align with security best practices.
- **Casing Format & Global Component:** Built a global casing format component allowing users to set uppercase and custom input formatting for employee fields (first name, last name, legal name) — implemented across both legacy and MVC frameworks for reuse across modules. Extended a similar solution for the Advanced Report Writer module with a separate implementation tailored to that area.
- **ARTemis Automation Testing:** Took over the automation testing project following a teammate's departure — added over 400 automated tests using ARTemis and manually troubleshoot failing tests to maintain coverage and release confidence.
- **Reporting Module Maintenance & Bug Resolution:** Investigated and resolved critical client-reported bugs and ongoing maintenance tickets for the reporting module — diagnosing root causes, restoring report accuracy, and ensuring stability for live production clients.

EDUCATION

B.S. in Computer Science — GPA: 4.0 / 4.0

Graduated Fall 2022

University of Houston – Downtown

AWARDS & RECOGNITION

- **Top 30 Developer – Paycom** — July 2023 – April 2024 (10 consecutive months)
- **3rd Place – Paycom Codeathon 2025** — Competitive team hackathon
- **Employee of the Quarter – Memorial Hermann Hospital** — Q3 2019
- **Employee of the Month – Memorial Hermann Hospital** — June 2020
