SUMMARY

Full-stack Software Engineer with **3.5 years** of experience building global HR platforms at Paycom, recognized as **Top 30 Developer out of 1,500+ engineers** for 10 consecutive months. Open to software engineering, QA, data analytics, business analysis, and technical roles.

WORK EXPERIENCE (3.5+ YEARS)

Software Developer IV | Paycom, Grapevine, TX

Dec 2022 – May 2026

- Owned **2 major features** end-to-end — solo spec, development, and QA with no dedicated coverage under tight deadlines.
- Authored technical specs — requirements, edge cases, and acceptance criteria — with Product and QA.
- Maintained release confidence by assuming **QA ownership** over the past year — catching defects across own and teammates' work before production.
- Restored delivery SLAs during **after-hours incidents** via on-call rotation using Splunk log analysis.
- Placed **3rd** in company-wide Codeathon 2025 out of hundreds of developers.

Software Developer Intern | Paycom, Grapevine, TX

May 2022 – Sep 2022

- Built UI improvements and collaborated on specs across cross-functional teams — converting to **full-time** upon completion.

Medical Laboratory Technologist | Memorial Hermann Health System, Houston, TX

2016 – 2021

- Interpreted diagnostic tests in a high-stakes clinical environment — precision and analytical thinking applied daily in engineering.

FEATURED PROJECTS — SOLO END-TO-END OWNERSHIP

Suppressed Fields Usability Items

- Closed a critical audit gap** by building audit/trigger tables from scratch — tracking field changes, old/new values, and timestamps with search, sort, pagination, and export (.csv, .xlsx, PDF).
- Extended testing to permission profiles, added unsaved-changes validation, fixed broken field ordering, and applied **i18n translation** throughout.

Copy and Search in Suppressed Fields

- Saved administrators hours** by building a brand-new copy feature for permission profiles — dynamically loading field counts, bucket info, and descriptions per user or profile selection.
- Built **real-time per-bucket search bars** and live field count indicators — resolved a legacy query bug returning incorrect results.

ADDITIONAL PROJECTS

ARW Field Limit Warning System

- Built a live field count tracker — **warning near 500 fields** and **red alert when exceeded**, both carrying through to report generation.

Name Casing Options in Advanced Report Writer

- Enforced **'Upper Case' as default across 13 name fields** and added 'User Entry' option — protecting existing client automation on flag enablement.

Reports Casing — EE Names (Legacy & Monte Carlo)

- Built reusable **ReportsCasingService** for Legacy and MVC frameworks using regex — adopted by multiple module teams.

New ARW Fields — Reporting Module Enhancements

- Expanded client reporting capabilities by building new fields across ARW and reporting modules.

International Currency Display in Reports

- Enabled **international clients** to view monetary values in local currency across reporting modules.

ARW Filter Display Enhancement

- Implemented dynamic filter display logic ensuring selected filters render with **accurate descriptions on the correct module tabs**.

AppSec & Security Hardening

- Reduced attack surface across multiple modules — implementing **XSS prevention, injection protection, and output encoding**.

Reporting Module Maintenance & Bug Resolution

- Resolved **40+ client-reported bugs** over 3.5 years via Splunk log analysis and internal documentation.

EDUCATION

B.S. Computer Science — University of Houston – Downtown | GPA: **4.0** | Graduated Fall 2022

A.S. Clinical Laboratory Science — Coleman College | GPA: **4.0**

TECHNICAL SKILLS

Languages: PHP, JavaScript (ES6+), HTML/CSS, jQuery

Databases: MySQL — query optimization, audit/trigger tables, high-volume performance

Tools & Platforms: PHPStorm, GitLab, Jira, Splunk (log analysis)

Engineering: Agile/Scrum, REST APIs, MVC, framework injection, legacy modernization, i18n, feature flags, root cause analysis

QA & Testing: Functional, regression & end-to-end testing, defect triage, acceptance criteria authoring

Security: XSS prevention, injection attack protection, output encoding, AppSec remediation

CERTIFICATIONS & AWARDS

Board-Certified Medical Laboratory Scientist (MLS) — ASCP

Top 30 Developer — Paycom | July 2023 – April 2024 (10 consecutive months)

3rd Place — Paycom Codeathon 2025 — Company-wide competitive hackathon

Employee of the Quarter & Employee of the Month — Memorial Hermann Hospital | Q3 2019 & June 2020
